### **III. REPORT OF COMPLIANCE**

#### **A. SPECIFIC CONDITIONS**

<b>Item no</b>	<b>Stipulations in EC</b>	<b>Status of Compliance</b>	<b>Remarks</b>
S-1	Steep cutting with more than 50m height are seen in the active and old quarried faces. Bench formation is being introduced in the presently active working area on the top but need planning with a main haulage to the top. Hence the steeply cut faces on the lower/bottom region must be fenced and provided with danger signs. It must be worked only after benches are made on the top.	Scrupulously follow the direction contained.	
S-2	Pockets of overburden are seen in the elevated crustal parts and in the eastern flanks. This is now stored in the low lying area but not in the designated places. Sheet flow of rain water can carry soil from this area. This is a need to preserve OB for restoration of the quarry during the closure. Care must be taken when the OB is removed from the steep slopes. Dark humus rich top soil must be preserved.	OB stored properly	
S-3	Mechanism to channelize the water, arrest soil movement, desilication and clarification of water	Scrupulously follow the direction contained.	

	do exist. The old pit in the Centre of the active quarry is used as a settling tank as well as RWH Pond. The entire flow from the quarry face is directed to this pit. The water existing from these areas is not provided with silt traps and lined channels though planned. A proper silt trap mechanism and clarification mechanism must be provided.		
S-4	There is no separate stockyard for the finished product from their crushed unit. Presently it is being stored in open spaces on the southern side.	Scrupulously follow the direction contained.	
S-5	Vegetative covering must be provided in the debris mantle slopes where quarry operation is not planned.	Scrupulously follow the direction contained.
